Experience

- AI Engineer** | *Exist Software Labs, Inc. – Internship, On-site* Feb 2026 – Present
- Optimized document analysis by fine-tuning SLMs, reducing processing latency from 2 minutes to 40 seconds in the PoC.
 - Built a Hybrid RAG pipeline using Azure AI Search and reranking, cutting analysis time by 65% for faster retrieval.
 - Implemented signature verification using feature extraction and verification, achieving 80% accuracy without Neural Networks.
 - Deployed an AI Governance framework with custom guardrails, ensuring 100% deterministic security across LLM providers.
 - Developed a CV pipeline using PyTorch, YOLO, and SAM3 to enable vector-based signature verification for claims.
 - Built Smart Expense & Invoice Auditor RPA Agents for automated financial auditing, validation, and data entry.
- Backend Engineer** | *Freelance – Remote, Contractual* June 2024 – Jan 2026
- Architected lending infrastructure using Domain Driven Design and state machines for 100% financial lifecycle traceability.
 - Reduced deployment latency by 87%, cutting global build-to-deploy pipelines from 41 minutes to under 5 minutes.
 - Engineered hybrid RBAC/PBAC with atomic transactions, ensuring 100% data integrity and granular access control.
 - Developed automated TDD suites, maintaining high-leverage reliability and 95%+ code coverage across services.
 - Optimized CI/CD via Turborepo and remote caching, eliminating 90% of redundant build tasks for faster delivery.
- Lead Software Engineer** | *Binspire – Full-time* Oct 2023 – Dec 2025
- Directed the Software and AI engineering lifecycle, from cost-finance modeling to multi-node deployment for Smart-City solutions.
 - Reduced module startup time by 90%, bringing system initialization from over a minute to under 10 seconds.
 - Implemented a vision pipeline with QR verification, ensuring 100% log accountability and data integrity.
 - Architected an autonomous Agentic Engine using custom MCP servers to expose IoT data for multi-model orchestration.
 - Engineered an IoT fleet-management system using Raspberry Pi and MQTT for high-performance Arcovia City operations.
 - Optimized collection routes via agentic reasoning, improving logistics efficiency for urban waste management.

Projects

- Ollamaduct** | *TypeScript, AI Gateway, CLI, Ollama* March 2026
- Local-first AI gateway for Ollama supporting both local and cloud-hybrid model orchestration; engineered multi-tenant workspaces, vector-based semantic caching (95%match rate) to reduce latency, and an automated Privacy Shield for redacting 25+ PII entity types via a high-performance Bun-powered CLI, scaling to 380+ weekly downloads on the npm registry within the first month of release.
- Haribon** | *TypeScript, RAG, Agent Harness, Deep Agents, AI Agent, LangGraph* December 2025
- Autonomous civic-tech agent for the BetterGov.ph platform; architected a Hybrid-RAG pipeline using LangGraph to automate data aggregation and content summarization, enabling high-fidelity retrieval of civic information and public records through an extensible agent harness.
- Workflow** | *TypeScript, AI Agent, LangGraph, MCP, Multi-Agent Systems* November 2025
- Agentic Waste Engine using a Multi-Agent System (MAS) architecture to transform rigid collection schedules into a demand-responsive network; orchestrated autonomous workflows with LangGraph and developed a custom MCP server to bridge the Binspire API with LLMs, enabling self-correcting data retrieval and proactive operational tasking for urban disposal.

Activities

- 14th IT Skills Olympics** | *Participant (Team Leader)* November 2025
- Led the Binspire project, an IoT-enabled agentic engine for waste management, which won 1st Runner-Up at the 14th IT Skills Olympics, demonstrating ai engineering, real-time data monitoring, route optimization, and backend scalability.
- CCS Academic Competition** | *Participant* February 2023
- Solved 3 out of 4 problem sets in my university Java programming contest during the first year.
- Open-Source** | *Developer & Contributor* January 2023 – Present
- Enhanced functionality, documentation, and accessibility for global and local projects, including [LangChain.js](#), [OSSPH](#), and [BetterGov.ph](#), by collaborating with community developers.

Skills

Programming Languages: C++, Java, SQL, Python, JavaScript, TypeScript
Libraries & Frameworks: LangGraph, LangChain, Haystack, MCP, N8N, PyTorch, OpenCV, Roboflow, UiPath, Hono.js, FastApi
Data & Infrastructure: AWS, Azure, Cloudflare, Docker, Digital Ocean, Nginx, HiveMQ, Langfuse, LangSmith, Hugging Face, MLflow

Education

- Pamantasan ng Lungsod ng Pasig**
- June 2022 – Present
- Bachelor of Science in Information Technology*
- Awards:**
- President's List Academic Achievement Awardee
 - Dean's List Academic Achievement Awardee
 - 1st Runner Up 14th IT Skills Olympics (IoT Category)
- Rizal High School**
- March 2020 – March 2022
- ICT – Programming*
- Awards:**
- 1st Overall – Best System Presenter
 - 1st Overall – Best System Design
 - 1st Overall – Best System Functionality
 - 1st Overall – Best System
