Experience

- AI Engineer** | *Exist Software Labs, Inc. – Part Time* Feb 2026 – Present
- Optimized document analysis by fine-tuning SLMs, reducing processing latency from 2 minutes to 40 seconds in the PoC.
 - Built a Hybrid RAG pipeline using Azure AI Search and reranking, cutting analysis time by 65% for faster retrieval.
 - Implemented signature verification using feature extraction and verification, achieving 80% accuracy without Neural Networks.
 - Deployed an AI Governance framework with custom guardrails, ensuring 100% deterministic security across LLM providers.
 - Developed a CV pipeline using PyTorch, YOLO, and SAM3 to enable vector-based signature verification for claims.
 - Architected a self-hosted OCR service using PaddleOCR with swappable backends, reducing costs and eliminating vendor lock-in.
 - Developed an internal procurement scraper for government bidding platforms, ranking IT bids via FAISS matching.
 - Evaluated enterprise AI gateways, building an internal knowledge base for company strict infrastructure compliance.
- Backend Engineer** | *Freelance – Remote, Contractual* June 2024 – Jan 2026
- Architected lending infrastructure using Domain Driven Design and state machines for 100% financial lifecycle traceability.
 - Reduced deployment latency by 87%, cutting global build-to-deploy pipelines from 41 minutes to under 5 minutes.
 - Engineered hybrid RBAC/PBAC with atomic transactions, ensuring 100% data integrity and granular access control.
 - Developed automated TDD suites, maintaining high-leverage reliability and 95%+ code coverage across services.
 - Optimized CI/CD via Turborepo and remote caching, eliminating 90% of redundant build tasks for faster delivery.
- Lead Software Engineer** | *Binspire – Full-time* Oct 2023 – Dec 2025
- Directed the Software and AI engineering lifecycle, from cost-finance modeling to multi-node deployment for Smart-City solutions.
 - Reduced module startup time by 90%, bringing system initialization from over a minute to under 10 seconds.
 - Implemented a vision pipeline with QR verification, ensuring 100% log accountability and data integrity.
 - Architected an autonomous Agentic Engine using custom MCP servers to expose IoT data for multi-model orchestration.
 - Engineered an IoT fleet-management system using Raspberry Pi and MQTT for high-performance Arcovia City operations.
 - Optimized collection routes via agentic reasoning, improving logistics efficiency for urban waste management.

Projects

- Regtrace** | *TypeScript, CI, DevOps, LLM Evaluation Framework* June 2026
- Built a CLI framework for evaluating and benchmarking LLM outputs across factuality, format, tone, and regression; integrated quality gates and golden-set baselines into CI/CD pipelines to automatically detect output regressions before deployment.
- Ollamaduct** | *TypeScript, AI Gateway, CLI, Ollama* March 2026
- Local-first AI gateway for Ollama with multi-tenant workspaces, semantic caching (95% match rate), and PII redaction for 25+ entity types, reaching 380+ weekly npm downloads.
- Workflow** | *TypeScript, AI Agent, LangGraph, MCP, Multi-Agent Systems* November 2025
- Agentic Waste Engine using a Multi-Agent System to convert rigid collection schedules into a demand-responsive network, with a custom MCP server bridging the Binspire API to LLMs.

Activities

- 14th IT Skills Olympics** | *Participant (Team Leader)* November 2025
- Led IoT-enabled agentic waste management engine project to 1st Runner-Up at the 14th IT Skills Olympics.
- Competitive Programming** | *Participant* February 2023
- Ranked among top performers in university-level competitive programming, solving 3/4 problem sets in Java as a first-year student.
 - Regularly compete on LeetCode, HackerRank, Codeforces, and other online platforms, focusing on algorithms, data structures, and time-constrained problem-solving.
- Open-Source** | *Developer & Contributor* January 2023 – Present
- Enhanced functionality, documentation, and accessibility for global and local projects, including [LangChain.js](#), [OSSPH](#), and [BetterGov.ph](#), by collaborating with community developers.

Skills

Programming Languages: C, C++, Java, SQL, Python, JavaScript, TypeScript
Libraries & Frameworks: LangGraph, LangChain, Haystack, MCP, N8N, PyTorch, OpenCV, Roboflow, UiPath, Hono.js, FastApi, FAISS
Data & Infrastructure: AWS, Azure, Cloudflare, Docker, Digital Ocean, Nginx, HiveMQ, Langfuse, LangSmith, Hugging Face, MLflow

Education

- | | |
|---|--|
| Pamantasan ng Lungsod ng Pasig
June 2022 – June 2026
<i>Bachelor of Science in Information Technology</i> | Rizal High School
March 2020 – March 2022
ICT Strand – Computer Programming |
